# Butane Calculator

Author: Dr. Suresh Agrawal,  
Founder and CEO, Academy Director  
[info@globaloms.com](mailto:info@globaloms.com)

# Prerequisites to use this Excel Macro based calculator

3

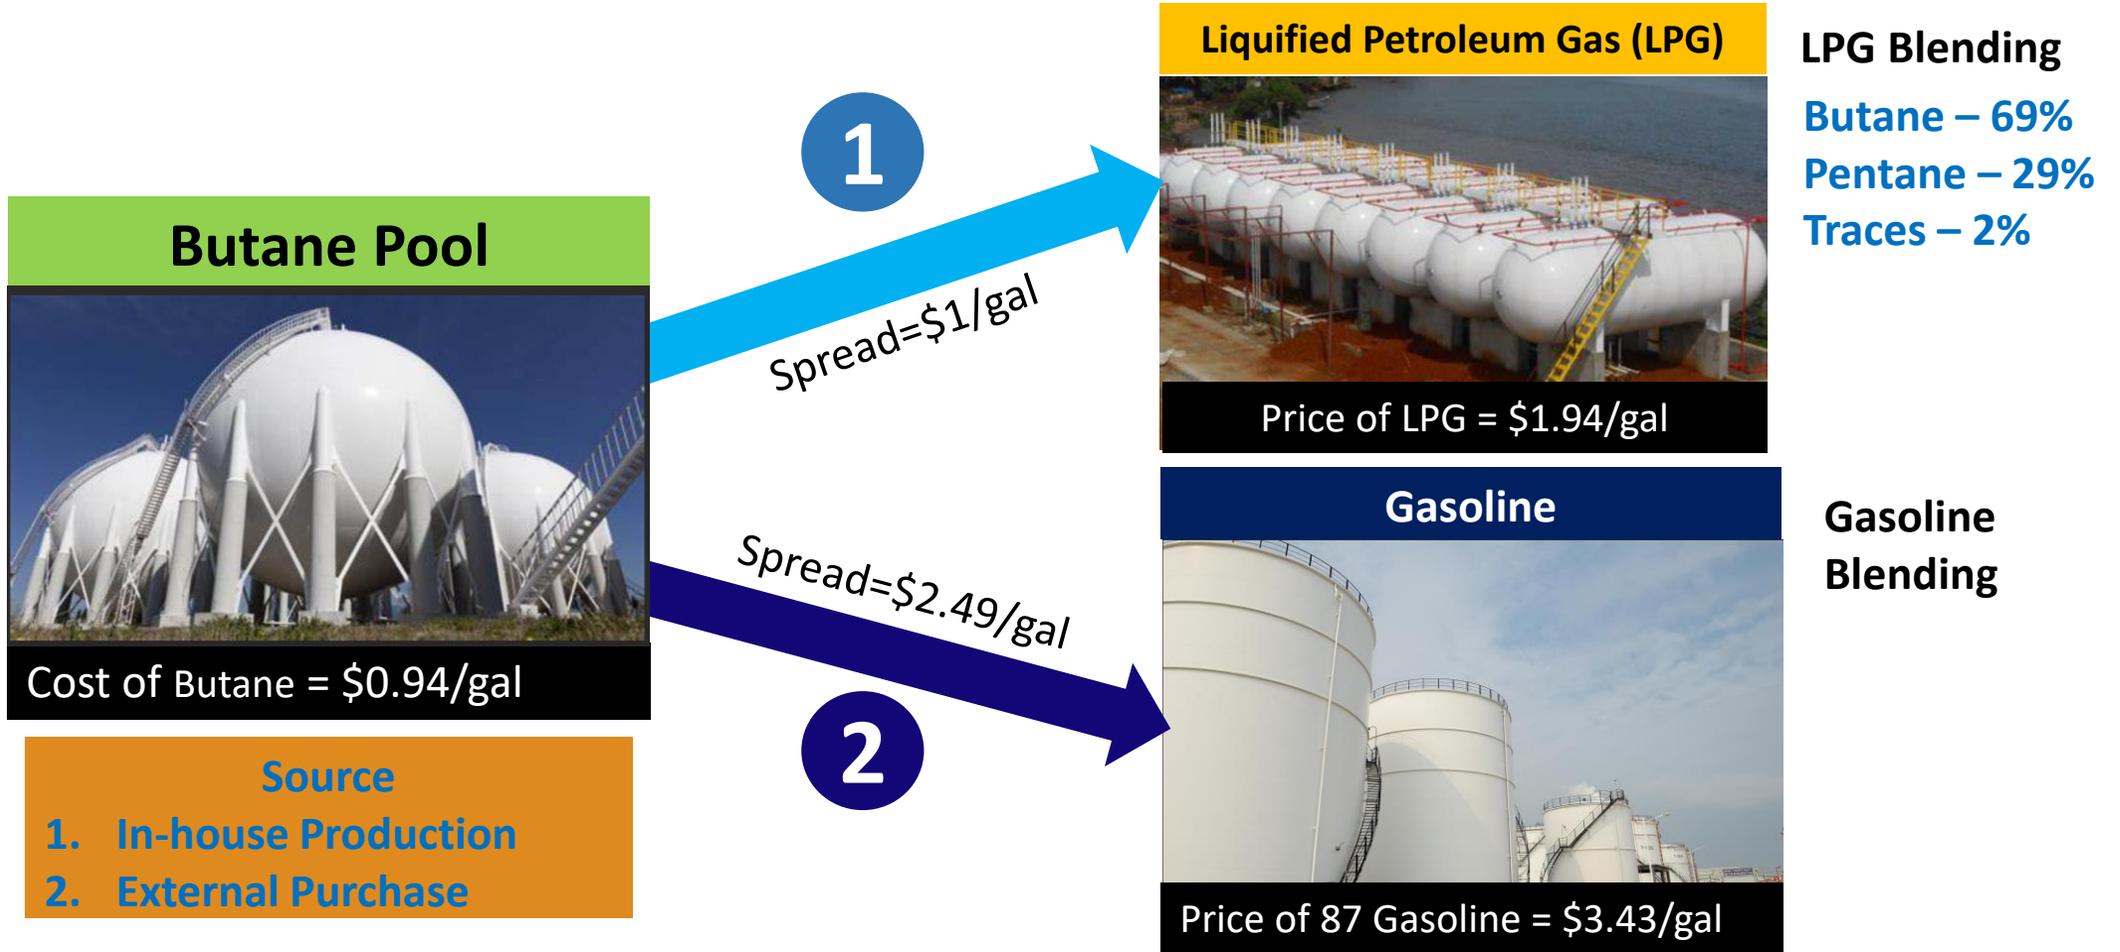

1. Excel VBA Macro must be turned on in the excel workbook as follows:
  - a. Go to Excel Options
  - b. Click on Trust Center
  - c. Click on Macro Setting
  - d. Check all as shown
2. You should be conversant to modify the VBA code if you need to. We hold no responsibility if the calculator breaks in the process.
3. You agree not to forward this calculator to any other recipient as it is copyrighted.

**OMSSW1-Butane Calculator**

# Butane Destinations and Economics

**\*\*The prices shown are world averages and spreads may differ for countries.**

# Butane Blending Models

## Linear Model

$$RVP_B = \sum_{i=1}^n v_i RVP_i$$

1

## Texaco Model (Non-linear)

No customizable parameter, can include a bias term for feedback

$$RVP_{BF} = \sum_{i=1}^n v_i RVP_i$$

$$RVP_{NC4} = 520.124(e^{-0.01516 * RVP_{BF}}) - 0.036635(RVP_{BF})^2 + 7.11985(RVP_{BF}) - 512.18 + RVPI_{NC4} [0.00061058(RVP_{BF})^2 - 0.015169(RVP_{BF}) + 1.08103]$$

$$RVP_B = RVP_{BF} + v_{NC4} RVP_{NC4}$$

2

## Indexed Model (Non-linear)

X ranges 1.25-1.75 and must be regressed specifically and can include a bias term for feedback

$$RVPI_i = RVP_i^x$$

$$RVP_B = \left[ \sum_{i=1}^n v_i RVPI_i \right]^{\frac{1}{x}}$$

3

All three models can be solved deterministically for Butane and Gasoline composition ratios.

## How to use the Calculator

6

1. In the sheet "Monthly Benefits" only, enter or change data for Octane, RVP and Prices, Click "RunAllModels"
2. The calculator will calculate benefits per all three models as shown in the sheet "Models"
3. The monthly benefits will be shown in the "Monthly Benefits" Sheet and also charted out in the "Blending Benefits" Sheets
